

# University of Central Florida

DEPARTMENT OF ELECTRICAL ENGINEERING & COMPUTER SCIENCE

## COMPUTER SCIENCE DIVISION

### CGS 2545 Database Concepts

#### Assignment 11

#### Cruise Database Project

**Due, Sunday, April 23, 2023 for maximum 100%**

**Monday, April 24, 2023 for maximum 90%**

**Tuesday, April 25, 2023 for maximum 80%**

**Wednesday, April 26, 2023 for maximum 70%**

#### Deliverables

To complete this assignment, submit the following **three** files to Webcourses:

1. An SQL file (i.e. save the file with file extension .sql) containing the SQL written to perform the tasks.
2. **IMPORTANT!**  
An exported SQL file using MySQL Workbench Data Export option. The file name should be the following format: FirstnameLastnameAssignment#.sql. Example: KarinMarkleAssignment2.sql.  
**Be sure to check option “Dump Stored Procedures and Functions”, see Figure 12!**
3. An ER Diagram generated by MySQL Workbench. The file name should be the following format: FirstnameLastnameAssignment#ERDiagram.mwb. Example: KarinMarkleAssignment2ERDiagram.mwb

#### Assignment Scope

1. Use database **cruise**.
2. Write a stored procedure.
3. Generate an ER diagram.

#### Resources

1. payCheckTemplate.sql

#### References

1. 49\_AdvancedSQL Stored Procedures Overview.pptx
2. 50\_AdvancedSQL Stored Procedures Definition.pptx
3. 51\_AdvancedSQL Stored Procedures Parameters.pptx
4. 52\_AdvancedSQL Stored Procedures Variables.pptx
5. 54\_AdvancedSQL Listing Stored Procedures.pptx
6. 55\_AdvancedSQL Stored Procedures IF.pptx
7. 57\_AdvancedSQL Stored Procedures Looping.pptx
8. 58\_AdvancedSQL Stored Procedures Cursor.pptx

### To access the DBMS

1. Launch the MySQL Command Line Employee executable or MySQL Workbench
2. Login in using the password set during installation “cgs2545” or your chosen password.

### Tasks

Query Description
<ol style="list-style-type: none"> <li>1. Change to use the database <b>cruise</b></li> <li>1. Create stored procedure <b>payCheck</b> to do the following             <ol style="list-style-type: none"> <li>a. Set the delimiter to \$\$</li> <li>b. Parameter list includes                 <ol style="list-style-type: none"> <li>i. IN <b>crewNum</b> INT</li> <li>ii. INOUT <b>salary</b> VARCHAR(4000)</li> </ol> </li> <li>c. Declare the following variables                 <ol style="list-style-type: none"> <li>i. <b>v_finished</b> integer DEFAULT 0</li> <li>ii. <b>v_lines</b> varchar(100) DEFAULT " ----- ----- "</li> <li>iii. <b>v_cFirst</b> varchar(100) DEFAULT ""</li> <li>iv. <b>v_cLast</b> varchar(100) DEFAULT ""</li> <li>v. <b>v_cAddress</b> varchar(100) DEFAULT ""</li> <li>vi. <b>v_cCity</b> varchar(100) DEFAULT "";</li> <li>vii. <b>v_cState</b> varchar(100) DEFAULT ""</li> <li>viii. <b>v_cZip</b> varchar(100) DEFAULT ""</li> <li>ix. <b>v_tHours</b> int DEFAULT 0</li> <li>x. <b>v_pHourly</b> decimal(5,2) DEFAULT 0.0</li> <li>xi. <b>v_overtime</b> INT DEFAULT 0</li> <li>xii. <b>v_count</b> integer DEFAULT 0</li> <li>xiii. <b>v_pay</b> decimal(8,2) DEFAULT 0.0</li> </ol> </li> <li>d. Declare cursor <b>crew_cursor</b> for the following join query                 <ol style="list-style-type: none"> <li>i. Select                     <ol style="list-style-type: none"> <li>1. <b>firstName</b> from table <b>crew</b></li> <li>2. <b>lastName</b> from table <b>crew</b></li> <li>3. <b>address</b> from table <b>crew</b></li> <li>4. <b>city</b> from table <b>cityState</b></li> <li>5. <b>state</b> from table <b>cityState</b></li> <li>6. <b>zipCode</b> from table <b>cityState</b></li> <li>7. Sum columns <b>sun</b>, <b>mon</b>, <b>tues</b>, <b>wed</b>, <b>thurs</b>, <b>fri</b>, and <b>sat</b> from table <b>timesheet</b> as <b>hours</b></li> <li>8. <b>hourly</b> from table <b>position</b></li> </ol> </li> <li>ii. Where column <b>crewId</b> in table <b>timesheet</b> equals the value in parameter <b>crewNum</b></li> </ol> </li> <li>e. Declare continue exception handler for not found set variable <b>v_finished</b> equal to 1</li> <li>f. Open cursor <b>crew_cursor</b></li> <li>g. Loop through the <b>crew_cursor</b>, using loop label <b>get_crew</b> <ol style="list-style-type: none"> <li>i. Fetch <b>crew_cursor</b> into variables                     <ol style="list-style-type: none"> <li>1. <b>v_cFirst</b></li> </ol> </li> </ol> </li> </ol> </li> </ol>

2. **v\_cLast**
  3. **v\_cAddress**
  4. **v\_cCity**
  5. **v\_cState**
  6. **v\_cZip**
  7. **v\_tHours**
  8. **v\_pHourly**
- ii. Check if variable **v\_finished** equals 1; if true, leave the loop using the loop label **get\_crew**
  - iii. Set **v\_count** equal to **v\_count** plus 1 (one)
  - iv. If the variable **v\_count** is equal to 1 (one)
    1. Calculate the crew's salary check using an **IF/ELSEIF** decision-making construct based on the following business logic
      - a. If the crew's hours (i.e., **v\_tHours**) are less than or equal to **40** then
        - i. set **v\_pay** equal to the **hours** multiplied by the **hourly** rate
      - b. Else If the crew's hours (i.e., **v\_tHours**) are greater than **40** then
        - i. set **v\_overtime** equal to (**v\_tHours** minus **40**) multiplied by (**v\_pHourly** \* **1.5**)
        - ii. set **v\_pay** equal to the crew's **40** hours multiplied by their hourly rate (i.e., **v\_pHourly**)
        - iii. set **v\_pay** equal to **v\_pay** plus **v\_overtime**
    2. Set INOUT parameter **salary** equal to concatenated
      - a. **salary**
      - b. '\From:\n'
    3. Set INOUT parameter **salary** equal to concatenated
      - a. **salary**
      - b. '\nCGS 2545 Cruiselines\n'
    4. Set INOUT parameter **salary** equal to concatenated
      - a. **salary**
      - b. '\UCF\n'
    5. Set INOUT parameter **salary** equal to concatenated
      - a. **salary**
      - b. '\MSB 260\n\n'
    6. Set INOUT parameter **salary** equal to concatenated
      - a. **salary**
      - b. 'Pay to the order of:\n\n'
    7. Set INOUT parameter **salary** equal to concatenated
      - a. **salary**
      - b. **v\_cFirst**
      - c. ''
      - d. **v\_cLast**
      - e. '\n'
    8. Set INOUT parameter **salary** equal to concatenated

<ul style="list-style-type: none"> <li>a. <b>salary</b></li> <li>b. v_cAddress</li> <li>c. '\n'</li> </ul>	
9. Set INOUT parameter <b>salary</b> equal to concatenated	
<ul style="list-style-type: none"> <li>a. <b>salary</b></li> <li>b. v_cCity</li> <li>c. ','</li> <li>d. v_cState</li> <li>e. ''</li> <li>f. v_cZip</li> <li>g. '\n'</li> </ul>	
10. Set INOUT parameter <b>salary</b> equal to concatenated	
<ul style="list-style-type: none"> <li>a. <b>salary</b></li> <li>b. 'In the amount of:\n\n'</li> </ul>	
11. Set INOUT parameter <b>salary</b> equal to concatenated	
<ul style="list-style-type: none"> <li>a. <b>salary</b></li> <li>b. '\$'</li> <li>c. v_pay</li> <li>d. '\n'</li> </ul>	
12. Set INOUT parameter <b>salary</b> equal to concatenated	
<ul style="list-style-type: none"> <li>a. <b>salary</b></li> <li>b. '\n'</li> <li>c. v_lines</li> <li>d. '\n'</li> </ul>	
<ul style="list-style-type: none"> <li>h. End the loop using the loop label <b>get_crew</b></li> <li>i. Close the stored cursor <b>crew_cursor</b></li> <li>j. End stored procedure</li> <li>k. Set the delimiter back to ;</li> </ul>	
2.	Write the source code to test the stored procedure
	<ul style="list-style-type: none"> <li>a. Set session variable <b>@salary</b> equal to ""</li> <li>b. Call stored procedure passing arguments               <ul style="list-style-type: none"> <li>a. <b>crewId</b> from table <b>timesheet</b></li> <li>b. <b>@salary</b> session variable</li> </ul> </li> <li>c. Select <b>@salary</b></li> </ul>
3.	Generate an ER Diagram using MySQL Workbench, save as a .mwb file
4.	Export database <b>cruise</b> using MySQL Workbench, save as a .sql file
5.	Provide written source code in a .sql file

Test Cases	
Test Case 1	Call stored procedure <b>payCheck</b> for crew Ty Bell, should look like Figure 1
Test Case 2	Call stored procedure <b>payCheck</b> for crew Oliwier Barnett, should look like Figure 2
Test Case 3	Call stored procedure <b>payCheck</b> for crew Rebekah Morgan, should look like Figure 3
Test Case 4	Call stored procedure <b>payCheck</b> for crew Krystal Walters, should look like Figure 4

<b>Test Case 5</b>	Call stored procedure <b>payCheck</b> for crew Kaya Hodge, should look like Figure 5
<b>Test Case 6</b>	Call stored procedure <b>payCheck</b> for crew Paris Solis, should look like Figure 6
<b>Test Case 7</b>	Call stored procedure <b>payCheck</b> for crew Umaiza Heath, should look like Figure 7
<b>Test Case 8</b>	Call stored procedure <b>payCheck</b> for crew Floyd Johns, should look like Figure 8
<b>Test Case 9</b>	Call stored procedure <b>payCheck</b> for crew Jemima Miller, should look like Figure 9
<b>Test Case 10</b>	Call stored procedure <b>payCheck</b> for crew Raja Glass, should look like Figure 10
<b>Test Case 11</b>	ER Diagram should look like Figure 11
